Continue

Some people living near you are quite mean and aggressive, and some of them may even be real criminals... Our hero is about to find out! He had just moved into a small, quite urban plan to start a new life and meet new friends. So far, his wish remains unfulfilled. The only person living nearby is his gloomy, sociopathic neighbor, who always keeps to himself and spends most of his time in his gloomy house. In fact, there seems to be something wrong with all this... You can't say for sure, but your suspicions are getting stronger by the day. Finally, you decide to break into his place and look at yourself ... This way you get and peep around looking for anything that can give you at least a vague idea of your neighbor's identity and occupation. A dark, eerie staircase will take you closer and closer to the basement... And that's where you run right into it - your angry neighbor whose arms are reaching for his throat... The next moment you'll wake up in your bed. Now you have to take another shot at your noble detective mission. But beware of the owner of the house! Every time you fail to reach your goal, he remembers what you did in front of him, so you won't be able to pull off this trick twice. Fortunately, there are many ways to get a neighbor busy and slip behind his back as he gets into another distraction. The house is full of convenient shelters and entry points that you can use to escape at the last minute - if your neighbor hasn't beaten you before hitting and set a trap for you there. Yes, it may take some time to succeed! Try to outsmart the AI killer and find out what he hides in the basement! What do you think of this game? Rating: 3.28 (81 votes) Since its release for PC back in 2015, Hello Neighbor has become a huge indie video game phenomenon. Now, after it also became a hit on consoles such as The Nintendo Switch and PlayStation 4, it has just landed on mobile platforms. That's why we're now introducing you to the APK version for Android. is exactly the same stealth horror game with controls adapted to the touchscreen of our smartphones and tablets. A game that, as you probably do, url //9apps.ooo/color#0000009App #000000 s/color is rather different from what we are used to seeing in this genre: there is no darkness, no monsters, no hidden in the shadows... The game offers us some cute cartoon graphics, but still manages to give us a hard time Hello Neighbors is a console and The game is classified as a horror genre, although the suspension will be more accurate. Teh Teh The game is that your neighbor has something to hide in his basement and you have to figure out what exactly. If it catches you snooping around however, the game ends and you should try again. In fact, it's like a tag game (while ending suddenly, it's not Gory), but there's a twist. Every time you are caught your neighbor (AI software) learns your tactics and adapts to make it more difficult for you. If you try to walk through the same door, for example, you may find a booby trap on the other side! Hello Neighbors is an original concept in strategy games with simple but engaging works of art, and even if you're new to horror games, it can keep you entertained for a long time. An waiting game developed too heavily with YouTube streamers in mind. The biggest advantage of this game is the concept itself. At a time when most games are just pale imitations of each other, Hello Neighbors dared to be different, and it paid off. You landed opposite a neighbor from hell in the (presumably) American suburb. A normal look (except for his distinctive moustache), a middle-aged man is up to something sinister in his basement and you have to figure out exactly what. It's so simple and at the same time quite believable and therefore easy to relate to. If you want to try the free version, you will only need to give your email address in order to create a GOG (game and film distribution platform) account and log in from which you can download the game. Having a trial makes a decision on whether to splash out and buy a full game is much less of a risk. As mentioned, this is a rather niche game: horror meets strategy plus a whimsical storyline. It's great that you can dip your nose into the water and get an idea if this game will be for you or not. The game is also very popular with YouTube streamers, so there are a lot of videos online you can watch as well. YouTube streamers have become a popular form of entertainment in which gamers share live video feeds of them playing the game for people to watch and comment on. This is key information because the game itself has clearly been strongly designed for this industry. As a game that tends to scare, it is not surprising that it was an obvious market for target. They were certainly successful. The cursory search features several Hello Neighbor videos on YouTube with over a million views. The emphasis of the game on having fun to watch came at the cost of being great to play. This is not an intuitive game to play. You may be willing to spend time restarting the game, trying to narrow down exactly how to solve your neighbor's misdeeds. You expect the goals themselves to be clear, however, but they really aren't. if you read the description of the game, exactly what you should do and when often completely elusive. While animated clips clips The levels adds a degree of overall storytelling, it really doesn't help with the gameplay itself. You will also have to work controls for yourself. That doesn't mean you don't have to play the game, just don't expect an easy ride! Where can you run this program? You can run this program on Windows 7 or later, iPhone 5S or later, PS4, XBOX ONE and Nintendo Switch. The breadth of platforms for this game is a testament to its popularity. While this review focuses on how the game works on Windows, the pros and cons of the game will remain pretty much the same. You won't need to worry about graphics if you use a game console, however. When you play on a Windows PC, you are given a choice of games in a variety of qualities from Low to Epic. It may take some trial and error to develop which option is suitable for your computer. Is there a better alternative? If you love horror games, you are spoilt for choice. From Dead Space (1 and 2) and Penumbria (Overture and Black Plague) to pathology and systemic shock 2, there is no shortage of options. When you take into account the originality of the Hello Neighbor concept and this unusual fusion with the puzzle solution to the end of the game strategy, it becomes difficult to replace or compare it with anything else. If you are looking for a quick and intuitive game to dive right into then this is not the one. With very little indication of what you actually have to do or even how you should do it (the controls remain something else a mystery), you need a lot of time and patience to get what this game has to offer. Unless of course you decide to enjoy the game like many others just to watch it played by someone else on YouTube. You're either willing to miss out on a few flaws or jump back into the main horror pool. Hi Neighbors is a cute game. Unlike most commercial games out there, you feel as if you can directly contact game developers. There's a bunch of personality and character, not just in the creativity of the concept, but also in the artistry, soundtrack and design of the suburban world created by the studio developers Dynamic Pixels. It's such a fun idea and comes off the same paraphrased game models that, in my account, are worth trying just for this reason. This is not a game to check out the latest and greatest graphics, and it is not intuitive. For better and worse, it's different. Should you download it? If you love horror and strategy games and you are willing to put up with a self-taught learning curve, then give this game a try. You don't have to pay and download the full game. Start with a free trial. If you're not sure whether you like strategy and horror games (or as a patient you'll try to work in the game) then give the court a back as well: it's free! Hello Neighbor is a stealth horror game about sneaking into your neighbor's house to find out what horrible secrets he is hiding in the basement. You're playing against a advanced AI that from every step you take. Really enjoying the climb through the backyard window? Expect a bear trap there. Sneaking through the front door? Soon there will be cameras. Trying to escape? A neighbor will find a shortcut and catch you. Minimum: SO: Windows 7 and up To Processor: i5 and up to Ram:6GB Plaka grfica: GTX 770 and up to Hard Drive : 2GB Placa de Som: Stereo. Play with a good stereo. Stereo, hello neighbor alpha 3 free download, hello neighbor alpha 3 free play online, hello neighbor alpha 3 free play no download, hello neighbor alpha 3 free play, hello neighbor alpha 3 game online free
